

Amendment
U.S. Patent Application No. 10/688,733
Attorney Docket No. MAT 314

Amendments to the Claims:

Please cancel claims 1-4, 7-11, 13-15, 17, 18, and 20-29 and add new claims 30-49. No new matter is added to the application by this amendment. All of the claims now pending in the application are reproduced below for ease of reference.

Listing of Claims:

1.-29. (Canceled)

30. (New) A toy vehicle comprising:

a vehicle body;

a chassis, the chassis being coupleable to the vehicle body;

a cockpit, the cockpit being configured to be disposed between the chassis and the vehicle body, the cockpit including one of an alignment member and a complimentary alignment member, one of the vehicle body and the chassis including the other of the alignment member and the complimentary alignment member, the alignment member being configured to receive the complimentary alignment member to align the cockpit relative to one of the vehicle body and the chassis;

a first component including a rotatable element, one of the chassis and the cockpit including a first magnet, the first component being coupleable to the first magnet; and

a second component including its own rotatable element, the one of the chassis and the cockpit including the first magnet including a second magnet, and the second component being coupleable to the second magnet.

31. (New) The toy vehicle of claim 30, wherein the first component includes an axle and a pair of wheels.

Amendment

U.S. Patent Application No. 10/688,733

Attorney Docket No. MAT 314

32. (New) The toy vehicle of claim 30, wherein the cockpit includes the alignment member, and one of the vehicle body and the chassis includes the complimentary alignment member.
33. (New) The toy vehicle of claim 30, wherein the chassis includes a pedestal and a magnet coupled to the pedestal, the pedestal being configured to support a component of the toy vehicle.
34. (New) The toy vehicle of claim 30, wherein the cockpit includes a third magnet, the third magnet being configured to couple the cockpit to one of the chassis and the vehicle body.
35. (New) The toy vehicle of claim 30, wherein the first component is disposed between the cockpit and the chassis, and the second component is disposed between the cockpit and the chassis.
36. (New) A toy vehicle comprising:
- a first component resembling a first portion of a vehicle;
 - a second component resembling a second portion of a vehicle, the second component being selectively coupleable to the first component;
 - a third component resembling a third portion of a vehicle, the third component being configured to be disposed between the first component and the second component;
 - an alignment assembly, the alignment assembly including a receiving member and an outwardly extending member, the receiving member being configured to receive the outwardly extending member, the third component including the receiving member of the alignment assembly, and the first component including the outwardly extending member of the alignment assembly; and
 - a first rotatable element resembling a portion of a vehicle, one of the first component and the second component including a first magnet, and wherein the first rotatable element is coupleable to the magnet.

Amendment

U.S. Patent Application No. 10/688,733

Attorney Docket No. MAT 314

37. (New) The toy vehicle of claim 36, further comprising:

a second rotatable element resembling a portion of a vehicle, the one of the first component and the second component including the first magnet also including a second magnet, and wherein the second rotatable element is coupleable to the second magnet.

38. (New) The toy vehicle of claim 36, further comprising:

a fourth component resembling a fourth portion of a vehicle, the fourth component includes its own magnet, wherein the fourth component is selectively coupleable to the first component by the magnet of the fourth component.

39. (New) The toy vehicle of claim 36, wherein the first component resembles a vehicle body, the second component resembles a chassis, and the third component resembles a cockpit of a vehicle.

40. (New) The toy vehicle of claim 36, wherein the first rotatable element includes an axle and a pair of wheels, the wheels being configured to rotate relative to the first component, the second component, and the third component.

41. (New) The toy vehicle of claim 36, wherein the third component is coupled to one of the first component and the second component by a magnet.

Amendment
U.S. Patent Application No. 10/688,733
Attorney Docket No. MAT 314

42. (New) A toy vehicle comprising:

- a chassis;
- a vehicle body, the vehicle body being coupled to the chassis;
- a cockpit, the cockpit being configured to be disposed between the chassis and the vehicle body;
- means for aligning the cockpit relative to one of the chassis and the vehicle body;
- means for magnetically coupling the cockpit to one of the chassis and the vehicle body;
- and
- means for mounting an axle and wheels proximate to the chassis.

43. (New) The toy vehicle of claim 42, wherein the means for aligning the cockpit includes an aperture and a post, the aperture being configured to receive the post.

44. (New) The toy vehicle of claim 43, wherein the cockpit includes one of the aperture and the post.

45. (New) The toy vehicle of claim 44, wherein the cockpit includes the aperture and one of the chassis and the vehicle body includes the post.

46. (New) The toy vehicle of claim 42, wherein the means for mounting an axle and wheels proximate to the chassis includes a magnet, the magnet being disposed proximate to the axle and wheels.

47. (New) The toy vehicle of claim 42, wherein the chassis includes a pedestal and a magnet coupled to the pedestal, the pedestal being configured to support a component of the toy vehicle.

Amendment

U.S. Patent Application No. 10/688,733

Attorney Docket No. MAT 314

48. (New) The toy vehicle of claim 42, wherein the chassis is configured to support the axle and wheels a distance away from the vehicle body.

49. (New) The toy vehicle of claim 42, wherein the means for magnetically coupling the cockpit to one of the chassis and the vehicle body includes a plurality of magnets.
